

VERTICAL GATE CATALOG

Lazy Gate is a manufacturer of Vertical Gate Lift Systems, as well as bi-fold, swing, sliding, and rolling gate systems. We work with local installers to supply them with reliable and economical solutions for the customers' gate projects.

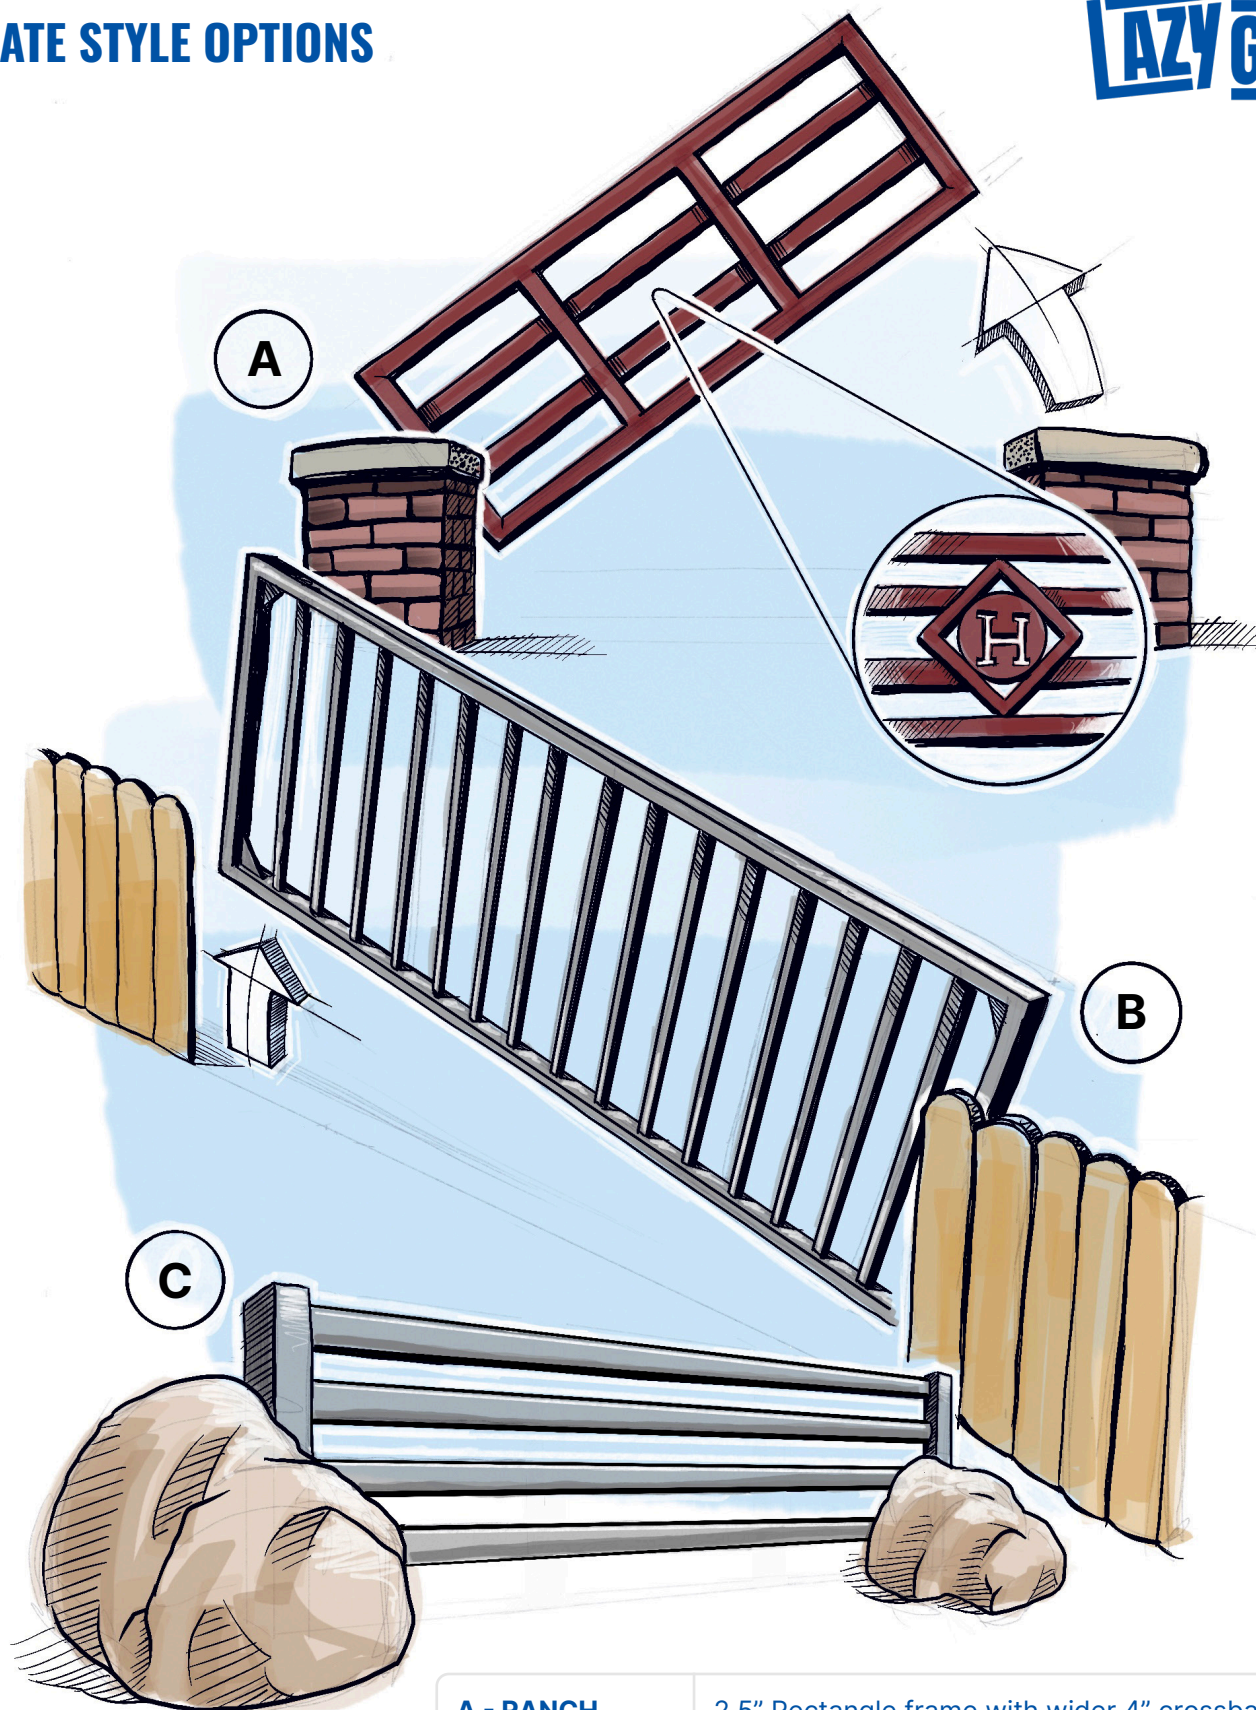

Lazy Gate Vertical Lift Systems use a proprietary and patented design to lift gates vertically using a much smaller footprint than the traditional styles. Lazy Gate vertical lift systems use an electric swing gate operator to allow for simple installation and convenient servicing. The motor is a brushless direct drive DC motor that is designed to work for 5 million cycles and has an integrated battery backup. The motor meets UL235 standards and works with all brands of access controls and peripherals. Full System pricing starts at \$11,995.

GATE OPERATOR

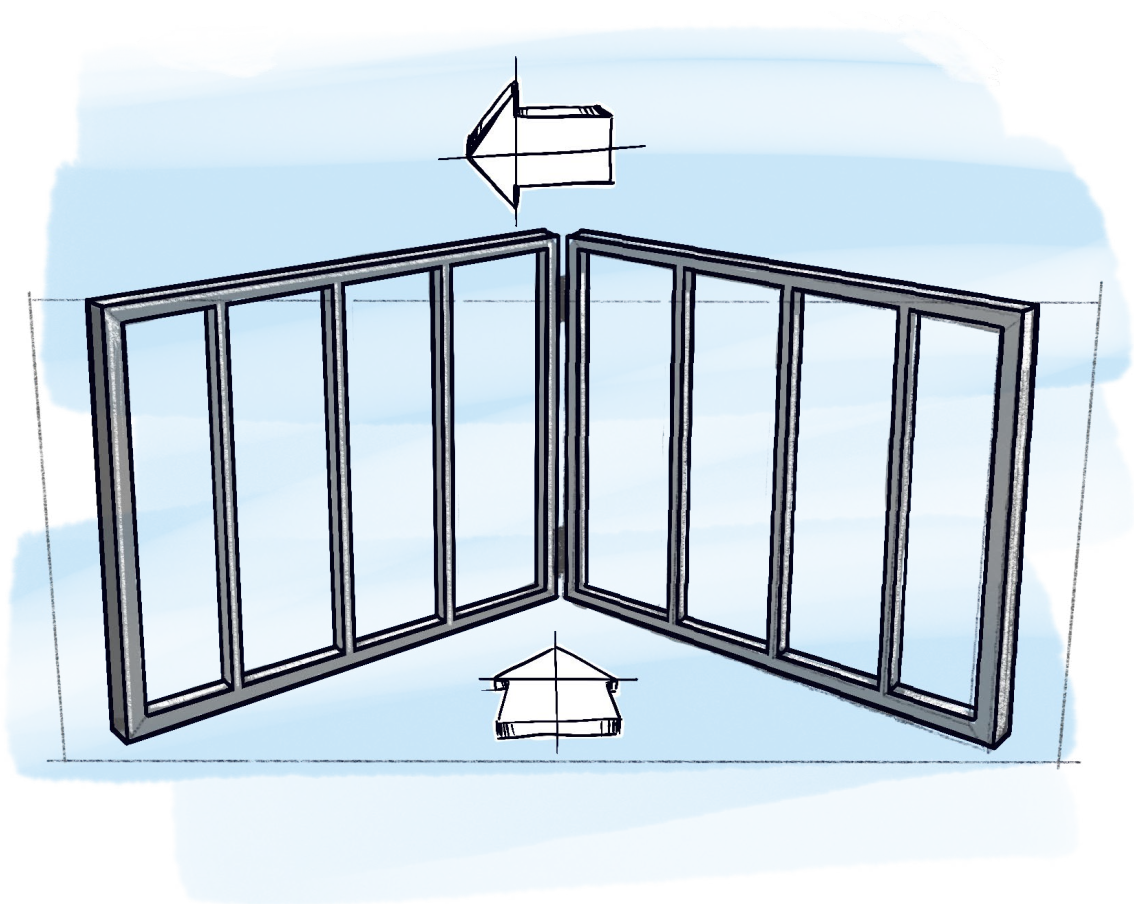

Our gate operator's small, compact design offers exceptional space efficiency without compromising on performance. Its sleek, minimalistic build allows for easy installation in tight spaces, making it ideal for properties with limited room. Despite its size, the operator delivers reliable, powerful operation, ensuring seamless gate movement while maintaining a discreet, unobtrusive presence.

We also offer replacement services, swapping out old gate systems for our smaller, more compact, and efficient design. Our solutions enhance performance while saving space, providing a reliable upgrade for your existing setup.

BI-FOLD GATES

Bi-fold gates offer an innovative solution for modern fencing needs, providing enhanced opportunities for customization. Available in most standard gate designs, these gates are highly versatile, accommodating a range of materials and finishes. Their unique design ensures that weight and wind flow are not problematic, allowing for infill options like metal or wood to enhance privacy and security. This flexibility makes bi-fold gates an excellent choice for both aesthetic and functional requirements.
