All systems above include the necessary safety sensors, motors, springs, remotes, chains, bolts, etc. to have the system working properly and safely. Ancillary add-ons can enhance the user experience for your specific needs. Shipping and handling typically ranges from **\$500 to \$3,500** depending on location.

(1) Standard Gate Panel Systems - These are systems that use a pad-mount commercial grade motor and a rigid gate panel. These work for any application including high-usage commercial projects as well as low-usage residential or ranch projects.

(2) Rackable/Collapsible Panel Systems - These are systems that use a residential grade motor and a collapsible gate panel. The gate hangs from the top crossbar on hinges and will collapse closed with lifted vertically. These work well for residential, ranch, HOA, and light commercial projects. This system works well up against walls and fences. This system is special in that it can operate either automated via a motor or manually via a handcrank.
